

Project CommuniTree: Growing *Tree-Mendous* Communities

“To guide and inspire personal and community stewardship of the trees and forests in Missouri and surrounding communities.” – Forest ReLeaf mission

Who We Are

CommuniTree Gardens is **the region’s only community-assisted nursery**. Project CommuniTree is the innovative project encourages community tree plantings by giving free trees to civic organizations, schools, neighborhood associations, parks and municipalities in Missouri and surrounding communities in adjacent states. The Missouri Department of Conservation provides seedlings from the State Nursery — typically 10 to 12 species — for cultivation at the nursery and eventual outplanting on public and not-for-profit property.

Receiving Trees

Individuals or organizations can apply for the trees, which are raised from seedlings to viable four- to six-foot trees at the nursery, and distributed to the recipients on a first-come, first-served basis each spring and fall. The trees must be planted on public or not-for-profit property. Recipients are asked to care for them for at least three years after planting.

History

Project CommuniTree was established on National Arbor Day in 1996 with a \$30,000 seed grant from the National Tree Trust and support from the St. Louis Community Foundation, the Missouri Department of Conservation, and the AmeriCorps NCCC. It is the flagship program of Forest ReLeaf of Missouri, the St. Louis-based nonprofit agency that has been reversing the decline of urban and community trees in the region through a variety of tree-planting and educational programs since 1993. The first Project CommuniTree harvest in 1998 supplied trees for a flood restoration project led by the Meramec River Recreation Association and the St. Louis County Department of Parks and Recreation.

Volunteer Team

Volunteer support is vital to the success of Project CommuniTree, and Forest ReLeaf is always looking for individuals to help care for the trees at the nursery. With only one forester managing the program on a part-time basis, the effort relies on hundreds of volunteers to assist with potting, weeding, fertilizing, pruning, mulching, maintenance, and tagging and harvesting trees for community distribution.

The nursery provides excellent opportunities for community service programs and field trips where volunteers not only gain experience in the general care of trees — they also meet others who share their desire to make our cities and towns *tree-mendous*. To learn more about donating your time, contact Forest ReLeaf.

Supporting Project CommuniTree

Today, Project CommuniTree is funded with generous donations from Ameren, the Employees Community Fund of Boeing St. Louis, the Missouri Department of Conservation, Missouri American Water, The Trio Foundation of St. Louis, and individual donors. The nursery is located in Creve Coeur Park in Maryland Heights, MO thanks to the generous support of St. Louis County Parks.

PROJECT COMMUNITREE AT-A-GLANCE

- Since the first distribution in fall 1998, **Forest ReLeaf has donated over 42,000 trees** to local groups through Project CommuniTree.
- **About 14,000 seedlings are under cultivation** at the nursery each year.
- **Some 4,000 – 5,000 trees are distributed annually** through Project CommuniTree.
- In 2005, **nearly 500 individuals volunteered more than 1,600 hours** to maintain the nursery, potting **6,500 new seedlings** and **harvesting 4,651 trees** for outplanting.
